

Weight on								Planet Weigh-In Activity:
	0							Students will use the spreadsheet application to design a planet weight calculator.
								While participating in this activity students will use multiple intelligences, which
Weight on								include logical, mathematical and naturalist intelligences.
Mercury	0.00							
Venus	0.00							This activity can be used in grades 3 through 6.
Mars	0.00							
Jupiter	0.00							Students will use technology tools to process data and report results. They also will
Saturn	0.00							technology resources to solve problems and make informed decisions. Overall, this
Uranus	0.00							activity will cover the standards of Creativity and Innovation, Communication and
Neptune	0.00							Collaboration, Research and Information Fluency and Technology Operations.
Pluto	0.00							
								This activity was easy and very fun to use. It really allows students to use their
								creativity and would keep them engaged throughout the whole activity.
								This activity would be hard to incorporate into the concentration of English, but I might
								be able to use the same concept if my class were reading something that involved
								space travel or different planets. We could use this concept to see what the effects
								different planets have on objects and people.
