

Pepperoni	6							Pizza Pie Graph:
Cheese	10							In this activity, students will use a spreadsheet to create a pie graph that show
Sausage	4							the class's favorite types of pizza. This activity will require the students to use
White	2							multiple intelligences. The intelligences will include logical, mathematical,
Combination	8							spatial and interpersonal.
								This activity is designed for students grades 2 through 6.
								Students use technology to locate, evaluate, and collect information from a
								variety of sources. Students will also use technology tools to process data and
								report results. Overall, this activity will cover the standards of Critical Thinking
								Problem Solving, Decision Making, Communication, Collaboration and
								Creativity.
								I really liked this activity because it allows students to communicate, work in
								groups or independently. This a really good activity that can involve the whole
								class. This is an idea that I can incorporate into English, as I could give the
								students options about forsighting an end of a novel. I also could use the sam
								concept by asking the studetns what their favorite part of a novel was and corr
								that with the rest of the class.
